PIONEERS OF THE CHINA TANK CLOSET

ELJER VITREOUS CHINA

ELJER TWO FIRED

GENUINE VITREOUS CHINA

In this Catalogue we have endeavored to show Fixtures that are in greatest demand and a sufficient variety of designs and sizes to fill the majority of requirements. As far as possible we have eliminated "frills" and fussy details which are but passing fashions and soon out of date.

Fixtures of plain, simple lines and graceful designs do not go out of style and are more easily cleaned.

SPECIAL GOODS

We have many moulds for special fixtures not shown in this catalogue. When you need a special fixture for some special condition we invite your inquiries.

QUALITY

ELJER Plumbing Fixtures are Genuine Two-fired Vitreous China,—similar in texture to the Finest French Table Ware but with the added toughness to withstand the rough usage often given plumbing material.

GUARANTEE

We guarantee each fixture to be genuine two-fired (fired twice) highest grade Vitreous China and that it will not crack, craze or discolor.

CODE WORDS

When telegraphing the use of our code words where possible will make a saving in the cost of telegrams.

ELJER VITREOUS CHINA

CODE FIVE LETTER CODE

Any two words can be combined and sent as one ten letter word. In deciphering telegrams separate all ten letter words into two five letter words.

ONE MEASUREMENT FOR ALL ELJER LOWDON TANK COMBINATIONS

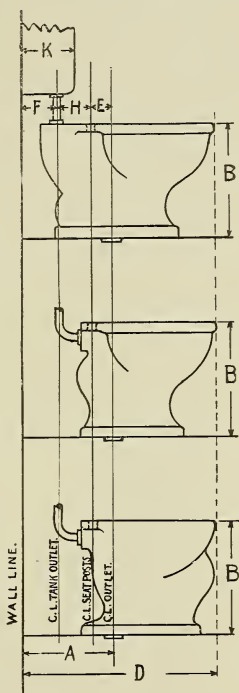

WASTE 12 IN. CENTER TO WALL

This Chart shows at a glance what we have accomplished in the standardization of roughing in measurements for our closets.

It will be seen that the measurement for the waste outlet, for the tank outlet and for center of waste outlet to seat posts, is the same for each of the different types of bowls.

All Low Tank Combinations regularly rough in at 12" center of waste outlet to finished wall.

If a greater measurement is wanted with Syphon Jet bowls an offset flush connection can be used. The regular ell furnished for back inlet bowls permits variations up to 14".

Having One Standard of Measurements will greatly simplify the jobber's and plumber's roughing measurement problems.

The Representative Plumbing Supply Jobbers throughout the country have our key to the roughing in measurement drawings on all fixtures shown in this Catalogue and can supply complete measurements on any of these fixtures.

DON'T REMOVE PAGES

SHASTA TANK NO. 461

SANUS BOWL WITH LIP NO. 536

ARCHITECT'S SPECIFICATION

Closet to be Eljer SANUS heavy vitreous china syphon jet bowl with EXTENDED sanitary flushing lip, SHASTA vitreous china tank with rounded front and large integral overflow and fitted with Eljer China Float Counter-weight flushing valve, full elevated high pressure ball cock, all china double acting top swinging lever and 2" N.P. straight flush connection with escutcheon; ebony finish Whale-bone-ite serpentine pattern seat with N.P. heavy bar hinge, $\frac{3}{8}$ " N.P. brass iron pipe size and weight supply to wall with angle stop valve and wall flange, heavy cast brass floor flange with bolts and china bolt caps, complete as described.

SHASTA NO. 461

(Patented)

ELJER SHASTA Vitreous China Tank with Rounded Front and Large Integral Overflow and fitted with Eljer China Float Counter-weight Flushing Valve; Full Elevated High Pressure Ball Cock; All China Rotary Lever, 2" N.P. Straight, Offset or Ell Flush Connection (as ordered) and regular Straight Supply Pipe (no stop valve) to floor.

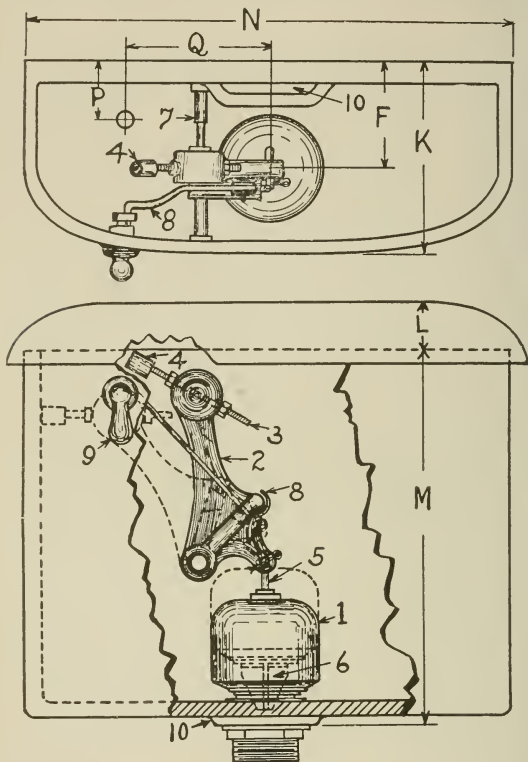

Can also be furnished with Concealed Back Supply.

Weight Crated 80 lbs.

The Shasta Tank is a distinct departure from the regular low down tank. It is fitted with a Massive Vitreous China Counter-weight valve. There is an extra large integral china overflow which cannot corrode and which will take care of the flow of water even under abnormal conditions. The lever is of the rotary type and can be turned completely around and cannot put strain on any part of the fittings. All metal parts are unusually heavy and strong.

The ordinary rubber float valve has been replaced by a china float valve, thus eliminating the greatest source of trouble usually experienced.

The slight difference in cost is very soon offset by the saving in water and repair bills.

SHASTA NO. 461

OPERATION—The fittings are shown in the closed position.

When the lever is turned the china float valve is lifted and the counterweight thrown to the left of the axle rod as indicated by the dotted lines. In this position the counterweight counterbalances the float valve until the water level recedes down to the bottom of the float at which time the float valve loses its buoyancy and falls back to its seat, pulling the counterweight back to the right of the axle rod where it bears down and holds the china float tightly to its seat.

ADJUSTING—Every tank is tested and adjusted before leaving the factory. The only part requiring any adjustment is the rubber bumper. The bumper should be adjusted so that the china float will remain up until the water level reaches the bottom of the float but it must not be so adjusted that the float will not fall back to its seat when the tank is empty. The adjustment is easily made by loosening the nuts on bumper rod and sliding it to right or left as required and retightening nuts.

For descriptive purposes the parts are numbered as follows:

- | | |
|-----------------------|----------------------------|
| 1—China Flush Valve | 6—Flush Valve Guide |
| 2—China Counterweight | 7—Counterweight Axle Rod |
| 3—Bumper Rod and Nuts | 8—Pull Rod |
| 4—Rubber Bumper | 9—China Lever |
| 5—Flush Valve Link | 10—Integral China Overflow |

ERIE Vitreous China Tank with Snug Specially Fitted Cover, and High Grade Regular Pattern Flushing Valve with Bell Top Overflow, Extra High Grade Full Elevated High Pressure Ballcock, All China Double Acting Top Swinging Lever and 2" N. P. Ell Flush Connection, $\frac{3}{8}$ " N. P. I. P. S. Supply with Flange.

The Boyne bowl is constructed with an **extra trap** or large overflow at the back which prevents the bowl overflowing in case the regular trap becomes clogged.

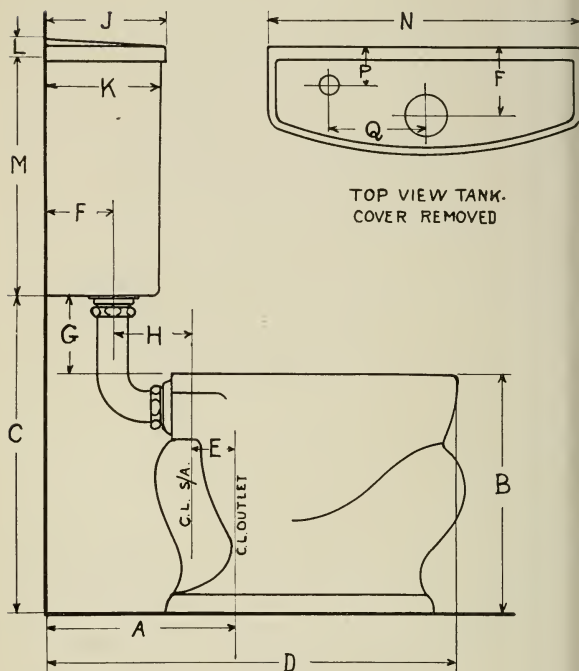

REGULAR ACTION

REGULAR TRAP CLOGGED

In action the bowl regularly operates as shown by sectional view at left. If the regular trap becomes clogged the water rises up and overflows thru the trap A-B as shown at the right. The trap A-B is amply large to take care of all water entering the bowl so that the bowl cannot overflow and flood the floor.

ELJER VITREOUS CHINA

BOYNE NON-OVERFLOW JET

NO. 463-507

ARCHITECT'S SPECIFICATION

Closet to be Eljer BOYNE NON-OVERFLOW No. 507 heavy massive pattern vitreous china bowl with extra large water area and deep seal and a large overflow at back, ERIE No. 463 vitreous china tank with snug specially fitted cover, and high grade regular pattern flushing valve with bell top overflow, extra high grade full elevated high pressure ball cock, all china double acting top swinging lever, high grade reinforced guaranteed seat and cover with N. P. bar hinge and 2" N. P. ell flush connection, $\frac{3}{8}$ " N. P. I. P. S. supply with flange complete as specified.

BEAVER-ANDES NO. 452-500

ELJER ANDES Heavy, Massive Pattern Vitreous China Syphon Action Washdown Bowl with a Large Water Area Properly Located and a Full Depth of Water Seal. **BEAVER** Vitreous China Tank with Plain Front and Flat Cover and Fitted with High-Grade Regular Pattern Flushing Valve; Full Elevated High Pressure Ball Cock; Double Acting Top Swinging Lever and 2" Nickel Plated Ell Flush Connection.

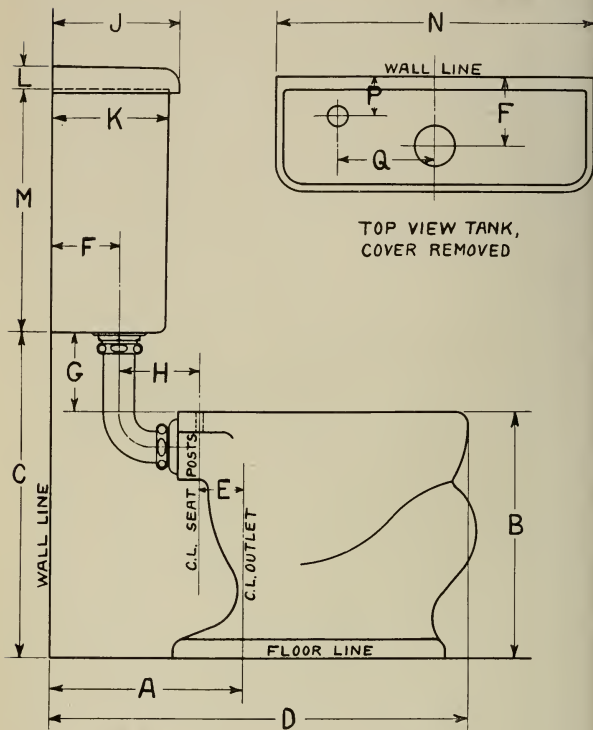

This combination is far above the average similar fixture. The bowl is massive in appearance and actually has a larger water area, a larger trap way and a larger opening inside the rim.

The tank is a flat front pattern with flat cover which can be used as a shelf. The trimmings are high grade.

	Weight Crated
Tank	75 lbs.
Bowl	58 lbs.

Weight Crated with Vent 85 lbs., Less Vent 80 lbs.

The Auburn can be furnished less vent, less extended lip, and with back, top or side spud as ordered. For tank or valve.

For Hanger or Chair Supports see following page.

VENTED TACOMA NO. 591

VENTED AUBURN NO. 598

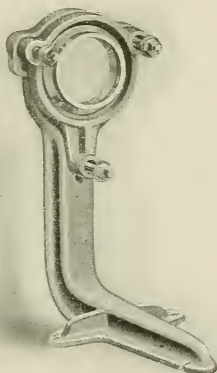

TACOMA HANGER NO. 586

ELJER TACOMA HANGER includes a Cast Iron Yoke with Three Stud Bolts with N.P. Cap Nuts and Washers and a Heavy Cast Brass Threaded Outlet Flange with Graphite Coated Asbestos Gasket.

This Hanger eliminates the need of a Utility Corridor.

Weight Crated 15 lbs.

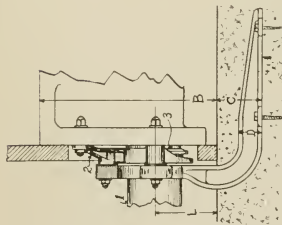

TACOMA CHAIR NO. 587

The TACOMA CHAIR includes a Heavy Cast Iron Chair with a Cast Iron Yoke, three stud bolts with N.P. Cap Nuts and Washers and a Heavy Cast Brass Outlet Flange with Graphite Coated Asbestos Gasket.

The Yoke permits several adjustments. No Utility Corridor is required.

When installed the Bowl is bolted to the Yoke with the Asbestos Gasket clamped between the bowl and the brass outlet flange. This gives a rigid support and a tight joint. The connection is easily and quickly made.

Weight Crated 50 lbs.

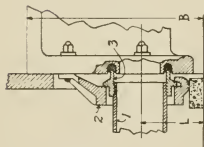

AUBURN NO. 589

HANGERS

Slip Yoke "2" over waste nipple "1". Screw on brass flange "3" with face projecting $\frac{5}{16}$ " in front of finished wall. Pull yoke forward and fit into place against the back of the brass flange and with the lower lip engaging the outer rim of brass flange and securely tighten the two set screws.

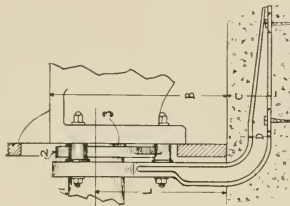

The faces of the arms of the yoke should project $\frac{1}{16}$ " in front of finished wall.

Place asbestos gasket in groove around outlet of bowl. Screw supporting studs into arms of the yoke. Set the bowl in place with gasket against the face of brass flange and screw up N.P. cap nuts until the back of the bowl strikes the arms of the yoke. The waste and vent lines should be securely braced as these carry the weight of the closet.

AUBURN NO. 588

INSTRUCTIONS FOR INSTALLING

TACOMA NO. 587

CHAIRS

The Tacoma or Auburn Chair should be firmly secured at the base with lag screws and set in concrete. Set at depth to give proper height of bowl above the floor. When the yoke is centered and bolted to the chair, the center line of the opening through the yoke will be on the center line of outlet of the bowl.

The projection in front of wall of yoke arms and brass flange is the same as with the hangers and the bowl is secured in the same manner as with the hangers.

These chairs permit slight adjustments to level the bowl horizontally, to raise or lower and to move to right or left.

The yoke can be set back by removing the iron washers from the studs between the yoke and chair or set forward by putting additional washers on the studs.

GENERAL

Terms: 30 days net face of invoice or 2% discount for cash within 10 days after shipment of goods.

DELAYS

Every effort is made to effect prompt shipment of orders received. There are however many hazards in the manufacture of this class of material and it is impossible to give definite promises for delivery and all promises are made subject to losses in the kiln or other causes beyond our control. We will not be responsible for any consequential damages on account of delays.

DEFECTIVE MATERIAL

All material is carefully inspected by experienced men before shipment and it is our aim to furnish only material of the best quality.

If material is claimed to be defective it must be passed on by our representative and if found to be defective we will furnish new pieces or allow credit, as may be agreed. In no case will we be responsible for any consequential or other damage beyond the price of the goods.

DESIGNS—MEASUREMENTS

We are constantly working to improve our product. This sometimes requires a change of design or measurement and these are therefore subject to change without notice. Measurements will be furnished at any time on request.

WEIGHTS

The weights given are approximate and are given only for convenience in estimating freight costs.

CARRIER DAMAGES

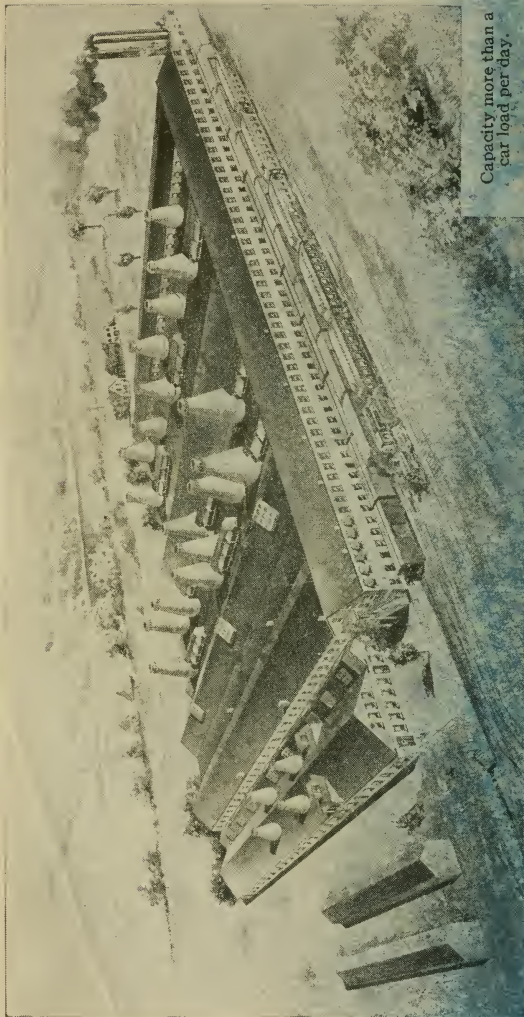

Common carriers are responsible for goods damaged or lost by them in transit. Our responsibility ceases when we receive a clear receipt from such carriers. Any claim for damages, loss or delay in transit is against the carrier and should be made promptly.

Examine all goods carefully before accepting or giving clear receipt.
